	Studio	Option + C
	Thumbnails	Option + T
	Tool Chest	Option + X

# CUSTOM KEYBOARD SHORTCUTS

Revu for Mac keyboard shortcuts can now be customized! So you can remap existing Revu for Mac shortcuts to match similar functions in other programs you already use, or add new shortcuts to create your own personal list of frequently used commands.

## **How to Create Custom Keyboard Shortcuts**

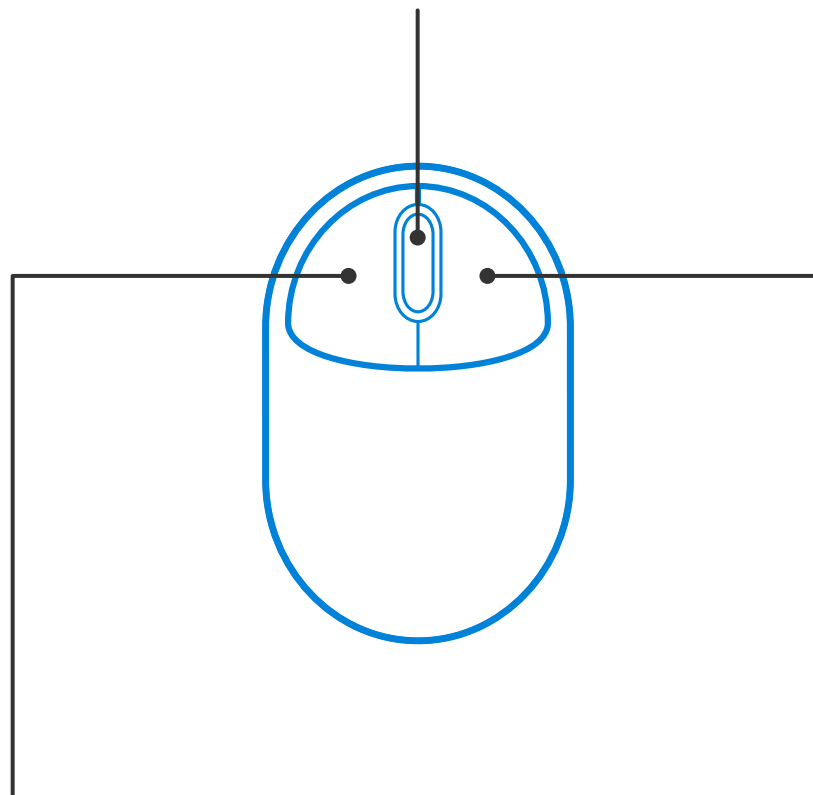

Select **Revu** on the Menu bar and click Keyboard Shortcuts. In the Keyboard Shortcuts window, select the tool or command you want to shortcut, enter the keystroke in the Shortcut field, and click **Add**. To use a shortcut already assigned to another tool, click **Reassign**.

All shortcuts listed in the Revu for Mac menus system will be automatically updated once a new shortcut has been assigned, making them easier to find and remember.

# MOUSE NAVIGATION

## Middle Button (wheel)

Pan = Click + Drag

## Left Button

Tool Operation = Click

## Right Button

Context Menu = Click
